

Facial Recognition Required in China for Internet Access

HP Hooded Cobra 666

[October 10, 2019](#)

What is next? Brain chip for citizens? Wait this has already happened.

Maybe internet monitoring and the police showing up at your doorstep when you make a wrong search? Wait, this has happened too.

Wait, the worst thing that could actually happen is a ranking system of citizens based on behavior! But this has already happened.

Cattle Farm 2030 is an actual thing, how Communist of them. Stalin would have a wet dream of present-day China. Actually it was a bit beyond his wildest wet dreams.

Makes me wonder if actually we should be more accepting to the idea of China somehow being obliterated, as the example the jews are setting in China is just setting the "Western Jew Control" example in pale motion.

Chinese citizens will soon need to scan their face before they can access internet services or get a new phone number

China's 854 million internet users will soon need to use facial identification in order to apply for new internet or mobile services.

The Chinese government announced last month that telecommunications companies will need to scan users' faces in order to verify their identities before they can access new services.

The new rule will apply from December 1.

The new legislation is part of China's wider efforts to keep close tabs on its citizens and monitor their activities and behaviors.

Chinese citizens will soon have to start using facial identification in order to sign up for internet services or get a new mobile number.

The Chinese government announced last month that residents applying for a new mobile or internet device will have their faces scanned by telecommunications carriers. The new rules will apply from December 1.

China's Ministry of Industry and Information Technology (MIIT), which is the state agency responsible for internet and technology regulation, wrote that the decision was part of its moves to "safeguard the legitimate rights and interests of citizens in the cyberspace" and prevent fraud, according to Quartz.

Recent reports indicate that China has around 854 million internet users.

The new legislation will also ban residents from transferring their mobile numbers to other people. According to Quartz, China appears to be the first country to require facial ID to sign up for mobile and internet services.

The new legislation is part of China's wider efforts to keep close tabs on its citizens and monitor their activities and behaviors.

Last month Chinese state media announced the development of a new "super camera," and artificial intelligence-driven 500-megapixel camera capable of identifying individual faces in crowds of tens of thousands of people in "perfect detail." State media said the device, which is five times more powerful than the human eye, could have "military, national defense and public security applications."

China last year also said it developed a new surveillance camera which could identify users based on their walking style and silhouette. The "gait recognition" technology has reportedly already been rolled out in several Chinese cities,

including Beijing and Shanghai.

Read more: China has started ranking citizens with a creepy 'social credit' system – here's what you can do wrong, and the embarrassing, demeaning ways they can punish you Chinese censorship and monitoring has soared under Chinese President Xi Jinping, and thousands of new censorship and surveillance initiatives have been issued every year.

In 2014, the Xi's government announced plans for its "social credit system," a vast, mandatory ranking system of all of its 1.4 billion citizens. According to China, the ranking system seeks to reinforce the notion that "keeping trust is glorious and breaking trust is disgraceful."

The plan, which has already been implemented in some cities, will be fully implemented in 2020.

Blocking the sidewalk, jaywalking, fare evasion, and even loitering can lower your social credit score. Punishments for maintaining a low social credit score include being banned from taking trains, having your internet speed cut, and being publicly shamed.
