Thank you for this, Mr. Cobra, I've been wondering about it for a little while myself actually and was leaning toward that conclusion myself. This shouldn't surprise, as they truly do act as parasites latching on and infiltrating stronger hosts. Very disgusting the way they intermix and weaken in this way.

You've actually got me wanting to double and triple check my family tree and make sure there aren't any in my line, lol. (Companies such as the one of ancestry.com looking over people's family lines to find the 'grave of Moses' has got me even more aggravated, Jewish crap everywhere we look it seems.)

Answer:

Moses was a FICTIONAL character, same as Abraham and many others. This is a dead giveaway they are bullshitting the populace.

This is like testing asswipes by comparing them to the "Shroud of Turin". These are all fictitious.

You will know this by heart. Gene corps are bullshitting people and this is apparent. They would more than likely add jewish blood to everyone, or some African, or whatever, so we can feel 'universally enough'. They have used these 'tests' for a decade now to tackle 'racism' which is obvious why these came up. Not for people to find anything and evaluate anything, but for reasons of propaganda on a next level.

Their samples are taken REGIONALLY. That means that if German samples were taken by Turks, Jews, or Somali's in Germany, in the database, that is "Germanic", aside mixed with other samples. The same goes for other regions. Corp's don't associate out jews either. If it's born in Russia, it's Russian, if it's born in Europe it's European. They are sampling in the jews as well to generate a false positive.

At the same time jewish blood can also be concealed in that sense. I would never trust corps that put all the jewish infiltrators of the Alt-Right as 'clear blooded 100%

Europeans' when they look like 100% Rabbinical Filth.

They have already proclaimed humans who are fundamentally different in their genome as being all the 'same' (ie science obeys to jews first and nature only at a second), even if such minor changes are actually so entirely decisive and fundamental in what we are existentially, changing the fates of living beings forever. They are not doing any such services honestly. It serves the globalist agenda.

The day will come soon in the future when the jews will all have 'certificates of purity' even if they look like incarnated reptilians and wear the Star of David of their forehead with a tattoo. And read the Torah in front of you while drinking the blood of babies.

Never trust a jew.

Look for example below. They basically admit they don't even know what they are doing:

From AncestryDNA which is a most famous gene crop:

5. My genetic ethnicity results don't seem to match what I would have expected. Why is that?

"Your family tree may go back hundreds of years, but there could be more to your family's story that's just out of reach of paper documents and conventional research. AncestryDNA can reach back hundreds, maybe even a thousand years, to tell you things that aren't in historical records—things you might have never known otherwise.

Although our ethnicity algorithms and prediction models will continue to improve over time, there are a few reasons why your ethnicity estimate may not be exactly what you expected: 1. Your genetic ethnicity may go back further than your family tree. 2. While your ancestors lived in a certain country, there may have been genetic influence from other places. 3. You don't necessarily share common DNA with all of your ancestors."

More here:

7. How accurate is the test?

"AncestryDNA uses advanced scientific techniques to produce your results. We measure and analyze a person's entire genome at over 700,000 locations. During the testing process, each DNA sample is held to a quality standard of at least a 98% call rate. Any results that don't meet that standard may require a new DNA sample to be collected.

Then we compare your DNA to one of the most comprehensive and unique collections of DNA samples from people around the world, to identify overlap. As our database of DNA samples continues to grow, you could receive updates with new information."

Let's see now who owns such companies...

*"A major shortcoming of the genetic tests offered by the **Google-backed company 23andMe**"*

[https://www.livescience.com/41534-23and ... mings.html](https://www.livescience.com/41534-23and...mings.html)

These are the same people who have mapped the whole planet as if it were a giant stable. Do you want them to have your genetic code verbatim?

[https://www.scientificamerican.com/arti ... da-thinks/](https://www.scientificamerican.com/arti...da-thinks/)

"23andMe Is Terrifying, but Not for the Reasons the FDA Thinks

The genetic-testing company's real goal is to hoard your personal data"

Additionally, let's become more paranoid for a while. What if they can map out spiritual abilities and other things, or even clone you? You don't have any idea where this "Data" is going, and companies sell this data with great pleasure in the future. Cloning is already fully possible, except of in stupid universities where these people think they are the 'heralds of science'. Real science undergoes underground...

So in my opinion at least, these are a scam, and people should refrain. This is only the highest breach of all data, which is your biological existence. They take this for their own purposes.

If anyone has any experience with such companies, write this in the comments, so we can have a more comprehensive view. Maybe even someone can also point to more scientific info as I am not a biologist myself.

Everyone would like such a test. Give it some time until the terrain is clean, have patience, and then these sciences will actually advance really and without the Torah and Talmud as their guide.
