

Why Some Fail on the LHP? Christian Trends of Thought

Edelwise wrote:

I'm having trouble understanding the cosmology. Jews may have been engineered by Greys, Reptilians, or whoever has dominion over them. But who or what is the source of this plague? Who's the evil mastermind? If the gods are the primary manifestation of Akasha, then shouldn't one or more of these gods be responsible for this mess? If that's not so, then the only other possibility is that a part of the original creation was (for lack of a better word) 'defective' and manifested as an infiltration into Satan's creation (for some reason).

Answer:

The fact is, in Sanskrit, the void (called En Sop) is also called the “pregnant void of creation”, or “womb of creation”. The “I” letter relates to this in Hinduism, and in the Greek the Iota is what existence is born from. “I” as a letter manifests prana. All existence comes from this womb of creation, descending into the world of forms and how it relates to the spectrum of light, sound, and number as a unified energy field. The geometry holds the information of light the shape which is also the sound and elemental quality.

There is simply a creative energy field at the source of everything. It's an organizing intelligence. From this all life forms arise and follow the evolutionary patterns of their environments. DNA literally manifests out of the En Sop (or Womb of Creation) as found in lab tests. I wrote about how evolution or the changing forms of beings is related to adjustments in the frequency field that the matter organizes itself according to. Periodic tables are the movement of light and its organizing frequencies. As I discussed the Greeks mention the “Perfected Form” which is perfection within nature, the golden mean (golden ratio spiral) template of the soul. The soul is multi-layered. This relates to vibrational templates and their properties. Elements are templates of existence. This is the principle of Venus.

Existence has a trine aspect, the symbol of existence is the triangle shown as the yoni or womb of creation. This relates to three natures of organized existence. Each chakra is shown as a triangle in Hinduism, and are called the “Yoni gates”.

The name of En Sop is the word, the 22 letters of Kabbalah, as everything in existence is a combination of different letters into sonic algorithms that generate and organize matter across the different levels of density fields that from the octave scales, light waves and geometric formulation into what we perceive as organic matter. This is the organizational intelligence of the universe. The Jews,

who stole the kabbalah from Gentiles, know this. The vocal range of the human voice has been mapped as having 54 sounds it can make. This relates to the 54 letters of the Sanskrit alphabet which relate to the petals of the chakras which form the vibrational, geometric, organic, elemental template of the human. A wise person can note what letter could correspond to different elemental combinations by where the letters are placed within the chakras. The number of petals relates to organization properties of the elements and how they relate to the planets and vowels. The vowels are the spirit of the letter and the seven vowels are called the seven mothers of creation in Hinduism. These are the seven chakras, and what each chakra relates to in the worlds or frequency temples of existence. Note each chakra is formed by the three natures which condense as the nadis along the scale they reside at, relating to electrical and magnetic properties in the astral, and how to unify them.

The vowels are stated to be the ruling name of creation in Kabbalah, same with the Greek and Hindu. IAO, the name of Zeus, the En Sop (which is were the Jews took this from) is the trine organization and generating principles of energy, that relate to the ruling powers of the seven vowels, planets and chakras. IAO is a serpent god as the trine aspects of the serpent IAO, Fire, Air, Water; these manifest as the three nadis. Note the Jews took IAO and hide it for themselves as the ancient Kabbalistic documents call their god IAO. This is the three lines of the triangle, the yoni of creation.

The different chakras are called Devas, and the Deva is a symbol of the cosmological properties of the element of existence it governs. This is dialectical in explanation, not literal. It is the same with the En Sop of which sparks from all the chakras or worlds in Kabbalah. En Sop is the level of existence when the inner sexual union of the chakras and soul has taken place and brought the person to perfection within Cosmos, nature. The En Sop is shown as serpent wearing a crown wrapped around the tree. The symbol of perfection and eternal life to the Gentiles. This is all dialectical. There is not a serpent wearing a crown in other realm directing all this.

The reason, I have noted, a lot of people fail on the Satanic Path is because they can't grasp this fact, and they revert back into something that is pseudo-Satanic in its doctrines that calls itself "Satanic" or "Luciferian" and formulates according to Christian ideology, in a Gnostic sense. They wish to evaporate into the extinction of their being which is right from RHP Buddhism which influenced early Christianity and gets mixed with Gnosticism in the sense of some evil god that created the world of matter [Mara or Yahweh] they must escape; they claim Yahweh instead of Mara. This is due to Christian teachings that the body is corrupted and the world is fallen and only the spirit is good and some mystical spiritual realm is good. They used this as the excuse to remove spiritual

knowledge and give people a death cult. However the soul is the reflection of the body, and the body is part of the soul.

There is just nature and the different scales that it organizes according to. The Gods are beings who perfected themselves within nature, and understand it from the highest level. That is true liberation.

The ancients had a principle. They called "Lucifer", which is their name for the perfecting order of nature, the Golden ratio spiral which are the energy movements all matter arise from and organize according to, and its math system is always coming back to 666. This relates to the principle of Venus, which is the principle of spirit forming matter. The 6. They placed the symbol of existence as three triangles (or, Yonis) that were formed into the pentagram and given 666 with the En Sop around it. This is the key to the underlying organizing principle of energy or spirit.

The point of spiritual practices is to give yourself a tune up and get the lead out. Which brings about the Venus or Lucifer form, the gold...en mean in the work. The serpent is always related to Venus. The serpent is the symbol of prana which is the force of the universe. Maha Kundalini is another term for this in Hinduism. It's dialectical. The highest light is stated in Hinduism to be blue which we perceive as White light. Note the god that is the symbol of the Venus principle, from Zeus to Vishnu, is always shown as blue; this what Venus rules in the east, White light which is also the blue light. This is dialectic. Venus is sound, light, and geometric form. The geometric numbers for the human body are related to 5:8. Venus numbers.
